

8 ANNUITIES

Annuities are financial contracts that pay a steady stream of income for either a fixed period of time or for the lifetime of the annuity owner (the *annuitant*). Most pension and retirement plan assets held by life insurers are annuity contracts. Because they can guarantee a stream of income for life, annuities protect annuity owners against the possibility of outliving their financial resources.

Annuities are sold as either immediate annuities or deferred annuities. Immediate annuities begin making annuity payments immediately, while deferred annuities defer the onset of annuity payments until some later date (typically when the annuity owner retires). During the deferral or accumulation phase, the annuity owner makes premium payments into the annuity and the savings inside the annuity grows to maximize the later annuity payments back to the annuity owner.

Codification of annual statements, effective for 2001 filings, changed the way certain lines of business are categorized and reported. This is particularly true of annuities and deposit-type contracts (e.g., guaranteed interest contracts or GICs). Prior to 2001, deposit-type funds were included with annuities; now they are reported separately. As a result, annuity data prior to 2001 is not comparable with 2001 or later data.

During 2016, payments into annuities, known as considerations, decreased 1.6 percent to \$347 billion (Table 8.1), while annuity reserves increased 4.4 percent to \$3.6 trillion (Table 8.2).

Annuities provide a variety of features designed to meet different needs. Depending on risk tolerance, an annuitant can choose a *fixed annuity*, which provides stable returns, or a *variable annuity* which is backed by equity investments for potentially greater, but uncertain, returns. A joint and survivor annuity ensures an income stream as long as either spouse is alive. Under some options, payouts will continue to a designated beneficiary after the annuitant's death.

GROUP AND INDIVIDUAL ANNUITIES

Contributions to group annuities, which are sold through employer-sponsored retirement plans, increased to \$124 billion in 2016, 0.3 percent higher than in 2015 (Table 8.1). Reserves for this type of annuity accounted for nearly one-third of all annuity reserves by the end of 2016 (30%), or \$1.1 trillion (Table 8.2). Benefit payments to group annuitants increased to \$28 billion, up 4.8 percent from 2015 (Table 8.3).

Employer-sponsored retirement plans are divided between two types that differ according to their benefits structure. *Defined benefit plans* provide a specified monthly benefit during retirement. The benefit amount is usually based on an employee's salary and length of service. The employer funds such plans and bears the entire investment risk.

Profit-sharing, 401(k), 403(b), and 457 plans are *defined contribution plans*. Rather than specifying benefits and retirement income, this type of plan specifies contributions, usually as a fixed amount or a percentage

of income, where the employee bears the investment risk. The benefit received under defined contribution plans is determined by contributions, investment returns, and expenses. Annuitization of the balance at retirement is not mandatory, and lump sums have been the most popular distribution method.

A person can also buy an annuity directly from a life insurer. During 2016, Americans deposited \$202 billion in individual annuities, down 3.2 percent from 2015 (Table 8.1). Individual annuity owners received \$51 billion in benefit payments (Table 8.3), leaving \$2.4 trillion in individual annuity reserves at year-end 2016 (Table 8.2).

SUPPLEMENTARY CONTRACTS, ANNUITIES CERTAIN, AND OTHER ANNUITIES

A *supplementary contract* is an agreement between an insurer and a life insurance policyholder or beneficiary in which the beneficiary chooses to receive the policy's proceeds over a period of time instead of as a lump sum. If this period is the lifetime of the beneficiary, the contract is a supplementary contract with life contingencies, essentially a life annuity; if the payments continue for a specific period, the contract is called a supplementary contract without life contingencies, or an annuity certain.

During 2016, \$20 billion was deposited into supplementary contracts without life contingencies and annuities certain, 2.7 percent more than in 2015 (Table 8.1), and \$20 billion was paid to policyholders or beneficiaries (Table 8.3), leaving a total reserve of \$90 billion at the end of 2016 to back future claims (Table 8.2)

NA: Not available

¹Beginning in 2001, includes supplementary contracts with life contingencies.

²Beginning in 1986, data reflect a change in statutory reporting methods mandated by the National Association of Insurance Commissioners.

³Includes supplementary contracts without life contingencies, annuities certain, lottery payouts, structured settlements, and income payment options.

⁴Codification effective with 2001 Annual Statement filings changed the way certain lines of business are categorized and reported, particularly deposit-type contracts. Since most guaranteed interest contracts (GICs) and other deposit-type funds are under group contracts, this accounting change has had a substantial effect on group annuities.

Premiums are net of reinsurance business and fluctuate with reinsurance activities as well as sale changes. Please see Chapter 6 for reinsurance business.
